

07-June-2018

A great review, **BEST BUY and 5 stars** for TAGA Harmony TTA-500 vacuum tube amplifier by “Hi-Fi Choice” (06-2018).

FOR CONNOISSEURS OF PLEASANT SOUND

*“The TTA-500 with the standard tubes onboard is characterized by **excellent control of the low frequency range** in both modes – triode and pentode. Of course the triode mode requires speakers with slightly higher sensitivity but if we satisfy this condition then the amplifier will pay back with the **splendid rhythm in the bass range**. Based on this fact we can tell that not only the amplifier’s tube output stages are well built in terms of current efficiency but that it also has an efficient power supply which provides a big power reserve much beyond the nominal demand of the output tubes. Thanks to good control of the bass and decent dynamics the TTA-500 feels good in music which demands very vivid presentation and especially fast attack, mostly in the macro scale. If you are fans of rock, metal or even music from the dance floors then this tube integrated amp will give you a lot of joy in playing such music genres. As befits tube amplification Taga Harmony TTA-500 offers **nice, juicy and most of all open mids** that is why when you want to fully use its potential, especially in the classical or jazz music, then I recommend to match it with speakers which provide rich details in the mid frequencies including the newest Taga Harmony models from the Platinum series (I had an opportunity to personally work on their sound)...”*

Summary

*“Taga Harmony TTA-500 presents such a complete and most of all consistent sound that I can admit with a clear conscience it is one of the best tube constructions I have ever had a chance to meet with in this price level. And what distinguishes this amplifier?... The manufacturer has not invested in optional, trendy features and put the money which was “saved” in that way in fine tuning of circuits which have a direct impact on a sound. The result is that the TTA-500 sounds like a pure valve amplifier and besides it offers the triode mode which will be definitely used by owners of high-efficiency loudspeakers. **And it does not cost a fortune so the solid tube technology is almost available at your fingertips.**”*
